Title: Submitting Cuisines

Actor(s): User

Purpose: Show successful submission of cuisine selection with filters or no filters (required to get restaurant results)

Scenario 1

Pre Condition(s): User has started application and is currently at the home page and wants no filter In his/her search.

Procedure:

- Choose and click whichever cuisine type that is from the API
- Don't interact with rating or color theme
- Click Go! Button
- Application checks to see if at least one cuisine is selected
- Cuisine is selected and Submission count is increased in database
- Application confirms cuisine type and outputs restaurants in a table for user to see

Post Condition(s): User has up to 20 results of restaurant results shown in a table with restaurant information.

Scenario 2

Pre Condition(s): user has started application and is currently at the home page and wants 4/5 rating filter and the color "red" for his/her theme.

Procedure:

- Choose and click whichever cuisine type that is from the API
- Click "4/5" rating option under rating filter
- Click "red" option under color filter
- Click Go! Button
- Application checks to see if at least one cuisine is selected
- Cuisine is selected and Submission count and color count of red is increased in database
- Application confirms cuisine type and filter choices and outputs table of restaurants.

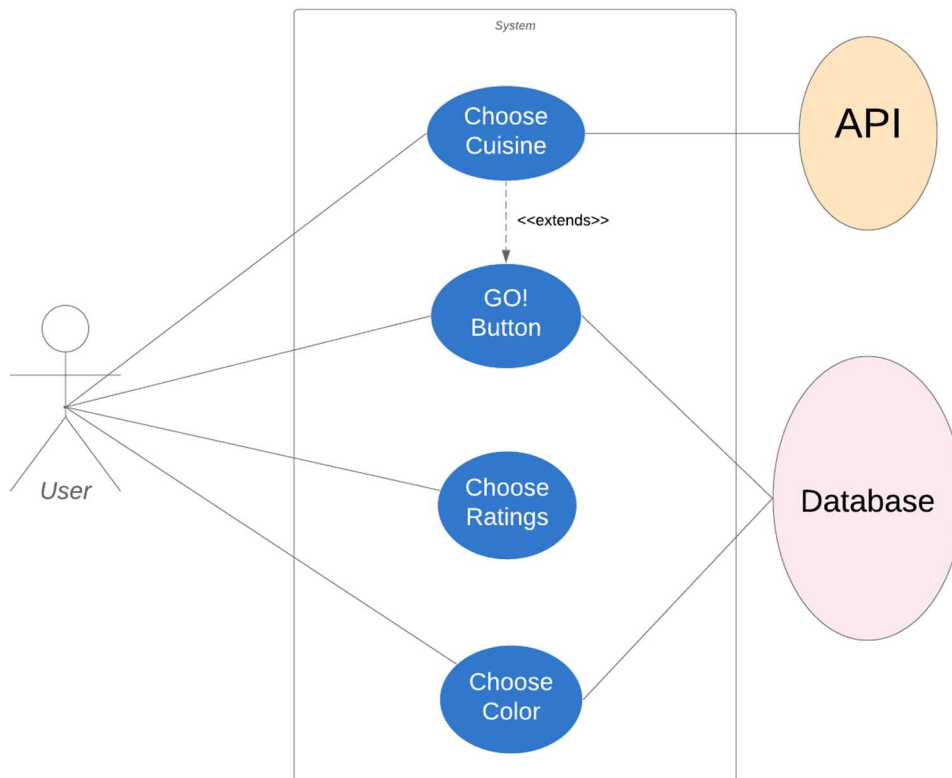

Post Condition(s): User has up to 20 results of restaurant results with only 4/5 or higher rating and restaurant information

Restaurant table has a red color outline

Title: Failed attempt to submit Cuisines

Actor(s): User

Purpose: Show an unsuccessful submission of Cuisines (required to get restaurant results)
